Keeping your equipment clean makes it last longer...But what's the best way to safely dispose of industrial waste water?

Operators of marinas and boat yards have discovered the value of keeping boats, docks and facilities clean. Disposing of the waste water generated by cleaning can be an issue, especially as more and more local governments develop restrictions. Oil, grease, minerals (especially salt), paint and metals such as copper, create an environmental problem, that must be treated properly before disposal. For instance, did you know...

- *It's against federal regulations to dump untreated, oil-laden wash water onto the ground, into a river, lake or ocean—or even into the storm drain.*
- *Local governments are quick to assess fines or surcharges for discharging oily water into the sewer.*
- *Hauling wastewater from a site is an alternative, but usually very expensive and doesn't totally eliminate the risk of liability.*

Only Water Maze has expertise in enough technologies to ensure the best solution!

Consider the Innovator Series to clean waste water from your heavy equipment. Four products that work together or individually...

- ***EC2 - Electrocoagulation System***
- ***CoAg - Chemical Coagulation System***
- ***Indexing Polishing Filter***
- ***Clean Water Recycling Module***

Wastewater Treatment Solutions for the...

MARINA-BOATYARD INDUSTRY

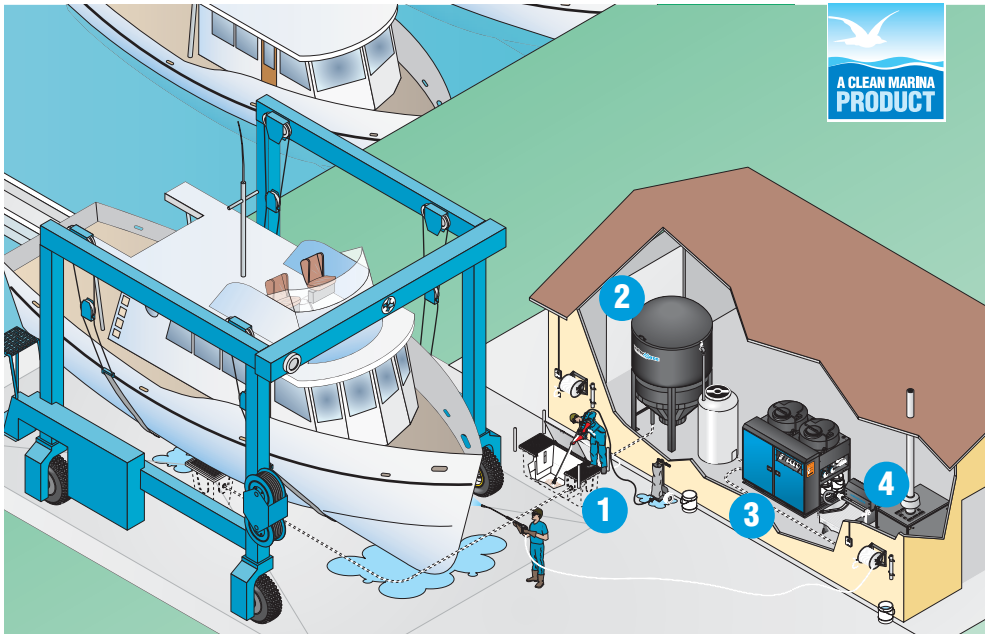

The Innovator Series uses the latest technology to treat waste water

The patent pending, advanced Electro-coagulation (EC) system is designed to completely treat wash water and other industrial waste waters that contains suspended solids, emulsified oils, and heavy metals. This system combines both EC water treatment technology and chemical flocculation to enhance and speed up the process of removing constituents from the waste water. What's unique about the new Innovator Series is that there is no untreated water left standing in the system.

Understanding your needs and identifying the correct solution takes years of providing support to the boat / marina industry. Proper support will come in the form of:

- Wastewater tests and analyses, which precisely identify the contaminants in your waste stream;
- Wash rack designs and pad drawings to maximize the effectiveness of your cleaning equipment and water treatment system;
- Maintenance programs by local technicians to ensure you're satisfied with your system long after it has been installed.

Water Maze - multiple solutions for treating marina / boatyard waste water

Water Maze provides drawings for **pad and pit designs** ideally suited to the marina and boatyard industry. Here's a sample of our equipment:

- 1** The **Pit cleaner** attaches to a pressure washer and easily suctions sludge from collection pits.
- 2** The Water Maze **CLT** serves as the ideal pre-treatment system for removing floating oils and solids before treating the water in the EC system.
- 3** The Water Maze **EC2-20A** uses our exclusive EC+Plus technology, integrating electrocoagulation with chemical flocculation, to treat and discharge to sewer or to recycle the complex waste stream associated with marina & boatyard applications.
- 4** The **Indexing Polishing Filter** acts as pre-treatment or post treatment to remove particulates, and works in conjunction with other Water Maze water treatment products.
