IE WATER ELIMINATOR

Model 70 shown
 Model 70 has a capacity of up to 70 gal/day.

**Get Rid of Wash Water
 the Easy Way**

The IE Water Eliminator is designed to be an efficient and reliable evaporator. It evaporates your waste water and concentrates the remaining sludge in a DOT drum for easy hauling. It can reduce the amount of hauling or water discharge by more than 95%.

The IE Water Eliminator can be used as a stand alone system for low volume applications or as an addition to a recycle system. When used with a recycle system it will significantly improve wash water quality by removing debris and TDS on a regular basis.

FEATURES:

- ◆ **Super Efficient Evaporation Technology** uses less energy than other technologies.
- ◆ **Atomization Nozzle Pump** - This nozzle pumps the dirty water from the drum and simultaneously atomizes it so that it is ready to be evaporated. This is all done with no moving parts or seals.
- ◆ **Drum Storage** - All water and solids are stored in a DOT drum. Once the solids build up to a certain point the drum would be removed for hauling and a new drum would be used.
- ◆ **Ultrasonic Level Sensor** - This sensor allows the controller to know the level of water in the drum without having to attach anything to the drum.
- ◆ **SmartRelay Controls** - The SmartRelay Controller keeps track of the water level in the drum and activates the fan, atomization nozzle pump, feed solenoid, and feed tank decant as needed.
